DELHI 110085

Name	: DUMMY			**Collected**	: 4/6/2021 11:18:00AM
Lab No.	: DUMMYZ010	**Age:** 25 Years	**Gender:** Male	**Received**	: 4/6/2021 11:23:08AM
				Reported	: 5/6/2021 6:12:52PM
A/c Status	: P	**Ref By :** DR. DUMMY DUMMY		**Report Status**	: Final

Test Name	Results	Units	Bio. Ref. Interval
CORTISOL STIMULATION BY ACTH, SERUM (CLIA)			
Cortisol, Basal	22.00	ug/dL	4.30 - 22.40
Cortisol Post ACTH stimulation			
30 minutes	2222.00	ug/dL	Peak concentration > 20
60 minutes	22.00	ug/dL	Peak concentration > 20

Interpretation

A peak serum cortisol concentration of > 20 ug/dL is a normal response. Peak value is more important than incremental change because it may not be seen in patients who are tested at times of stress, when their adrenal output of cortisol is already maximally stimulated by endogenous ACTH.

Comments

- Patients with adrenal destruction (Addison's disease) do not show any change in serum cortisol level after ACTH administration
- Patients with atrophy of adrenal cortex caused by exogenous glucocorticoid treatment or dysfunction of pituitary gland or hypothalamus may show a slight rise in serum cortisol level but not one of normal magnitude.

Sample Report

Dr Himangshu Mazumdar
MD, Biochemistry
Senior Consultant - Clinical Chemistry & Biochemical Genetics
